

What Is Claimed Is:

1. An AV system for a vehicle having a tiltable monitor disposed at a front surface of a main body of the AV system, the driving assembly comprising:

5 a low-surface chassis disposed at a lower end of the main body; and

a slide chassis mounted on the low-surface chassis, moving a lower side of the monitor back and forth, wherein a back-and-forth motion member for moving a motor part and the slide chassis back and forth, using power provided by the motor part, is mounted on the low-surface chassis.

10

2. The driving assembly according to claim 1, wherein a connector is mounted on the motor part, and the connector is connected to a main printed circuit board and cable for controlling the motor.

15 3. The driving assembly according to claim 1, wherein the main printed circuit board is attached to the main body.

4. The driving assembly according to claims 1, wherein the motor part comprises:

20 a motor;

a printed circuit board mounted with the connector, being attached to one end of the motor; and

a worm attached to the other hand of the motor, for transferring power from the motor to the back-and-forth motion member.

25

5. The driving assembly according to claims 2, wherein the motor part comprises:

a motor;

a printed circuit board mounted with the connector, being attached to one end of
5 the motor; and

a worm attached to the other hand of the motor, for transferring power from the motor to the back-and-forth motion member.

6. The driving assembly according to claims 3, wherein the motor part
10 comprises:

a motor;

a printed circuit board mounted with the connector, being attached to one end of
the motor; and

a worm attached to the other hand of the motor, for transferring power from the
15 motor to the back-and-forth motion member.

7. The driving assembly according to claim 4, wherein the back-and-forth motion member comprises:

a wormwheel to be engaged with the worm, and

20 a wheel, one end thereof being engaged with the wormwheel and the other end thereof being engaged with a slide chassis.

8. The driving assembly according to claim 4, wherein a bracket for supporting the motor part is further mounted on the low-surface chassis.

9. The driving assembly according to claim 4, wherein at least one reinforcing bracket is further mounted on the slide chassis.

10. The driving assembly according to claim 5, wherein the back-and-forth
5 motion member comprises:

a wormwheel to be engaged with the worm, and

a wheel, one end thereof being engaged with the wormwheel and the other end thereof being engaged with a slide chassis.

10 11. The driving assembly according to claim 5, wherein a bracket for supporting the motor part is further mounted on the low-surface chassis.

12. The driving assembly according to claim 5, wherein at least one reinforcing bracket is further mounted on the slide chassis.

15

13. The driving assembly according to claim 6, wherein the back-and-forth motion member comprises:

a wormwheel to be engaged with the worm, and

a wheel, one end thereof being engaged with the wormwheel and the other end
20 thereof being engaged with a slide chassis.

14. The driving assembly according to claim 6, wherein a bracket for supporting the motor part is further mounted on the low-surface chassis.

25 15. The driving assembly according to claim 6, wherein at least one

reinforcing bracket is further mounted on the slide chassis.
